

Corrosion Control Services

Corrosion Control Services offer total corrosion control solutions for yachts

We supply rust stabilising primers and glass reinforced topcoats for areas where you can paint and vapour phase inhibitors for areas where you can't.

Our products are designed to treat all areas on board against corrosion.

Application areas range from electrical enclosures, void spaces, bilges, topsides, tanks and underwater areas through to the internals of main engines and generators.

Our service includes a full corrosion control inspection on board the vessel in order to identify problem areas, resulting in an illustrated report detailing proposed remedial actions and costing.
